

VIBE Learning Platform - Functional Features Documentation

1. Teacher Panel (Creator & Admin Workspace)

The Teacher Panel is a comprehensive dashboard designed for course creation, student management, and content administration.

Course & Curriculum Management

- **Course Creation & Structuring:** Teachers can build courses from scratch, organizing them logically into versions, modules, and sections.
- **Activity Authoring:** A robust activity builder allows the creation of various interactive learning modules, including interactive video lessons, quizzes, and project assignments.
- **Course Versioning:** Instructors can manage multiple versions of a single course, allowing for curriculum updates and iteration without disrupting past or ongoing cohorts.

AI-Powered Content Generation

- **Automated Video Transcription:** Upon uploading course videos, the platform automatically processes the audio and generates accurate text transcriptions with precise timestamps.
- **Intelligent Question Generation:** The platform automatically generates a diverse set of assessment questions based directly on the video transcripts. The system ensures a mix of question types (e.g., true/false, multiple choice, descriptive) focused on conceptual understanding rather than rote memorization.
- **Synchronized Video Quizzes:** Teachers can seamlessly integrate the generated questions into the video timeline. This creates interactive video experiences where questions automatically pop up at specific timestamps, testing the student's comprehension of the concepts just discussed.

Cohort & Student Management

- **Cohort Administration:** Teachers can group students into specific cohorts (batches) and assign them to specific course versions and timelines.
- **Progress Tracking & Analytics:** Real-time dashboards provide deep insights into cohort performance, individual student progress, activity completion rates, and overall engagement metrics.
- **Gamification Control:** Teachers have administrative oversight of the platform's gamification features. They can monitor a student's Health Points (HP) and manually reset them if a student gets stuck or locked out.

Grading & Feedback System

- **Submission Review:** Teachers have a dedicated interface to review all student submissions for activities and comprehensive projects.
- **Personalized Feedback:** Instructors can provide direct, personalized feedback and assign grades or scores to subjective student work.

- **Export Capabilities:** Submission data, grades, and feedback can be exported for external record-keeping or deeper analysis.
 - **Issue Resolution:** Teachers can view, track, and manage specific questions or issues flagged by students during their learning process.
-

2. Student Panel (Learner Workspace)

The Student Panel is an immersive, gamified learning environment designed to keep students actively engaged and accountable for their progress.

Interactive Learning Experience

- **Structured Learning Paths:** Students can navigate through their assigned course versions, modules, and sections in a clear, guided sequence.
- **Interactive Video Player:** The video player features synchronized transcripts that highlight the current spoken text, making it easier to follow along and digest complex topics.
- **In-Video Assessments:** While watching course videos, the playback automatically pauses at key moments to present contextual questions. Students must answer these questions to proceed, ensuring active attention and immediate knowledge checks.

Assessment & Project Submissions

- **Diverse Question Formats:** Students interact with a variety of question formats designed to test deep conceptual understanding.
- **Project Portals:** A dedicated submission interface allows students to upload project files, links, and assignments for comprehensive teacher review.
- **Instant Explanations:** For objective and auto-graded questions, students receive immediate feedback along with detailed explanations for why an answer was correct or incorrect.

Gamification & Progress Tracking

- **Health Points (HP) System:** A core gamification feature where students have a "health" bar. Answering questions incorrectly depletes HP, adding stakes to the learning process. If HP drops too low, their progress may be temporarily restricted until they review the material or a teacher intervenes.
- **Personalized Dashboard:** Students can view their overall progress, completed activities, earned scores, and remaining health points at a glance.
- **Student Ledger:** A detailed, chronological ledger tracks the student's entire journey, recording all their interactions, scores, submissions, and status changes across different cohorts.

AI Proctoring & Academic Integrity

- **Webcam Monitoring:** For specific high-stakes activities and assessments, the platform utilizes the student's webcam to ensure active presence, focus, and identity verification.
- **Anti-Cheat Mechanisms:** The system includes background security checks to prevent the use of virtual cameras, screen-sharing bypasses, or other unfair advantages, ensuring a secure testing environment.

Communication & Support

- **Flagging System:** If a student encounters an issue, finds a bug, or has a specific question about a learning segment, they can flag it directly from the video interface for the teacher to review.
- **Feedback Inbox:** Students can easily view their graded projects and read personalized feedback and constructive criticism left by their instructors.
